

# Water Conservation

## Tips for conserving water inside the home.

Over half the water use inside a home takes place in the bathroom.

- Turn off the water while shaving or brushing teeth. (Savings: up to 4 gallons a minute, or up to 200 gallons a week for a family of four!)
- Take short showers instead of tub baths; showers use less water. (If you keep your showers to under 5 minutes you'll save up to 1,000 gallons a month.)
- If you do take a bath, be sure to plug the drain right away and adjust the temperature as you fill the tub.
- Don't use your toilet as a wastebasket. Use a leak-free, high efficiency toilet. (Toilets are by far the main source of water use in the home: nearly 30 percent of residential indoor water consumption.)
- When washing your hands, turn off the water while you lather.
- Wash only full loads of dishes, and select the appropriate water level or load size option on the dishwasher.
- Do not use water to defrost frozen foods; thaw foods in the refrigerator overnight.
- Scrape, rather than rinse dishes before loading them into the dishwasher.
- Compost food waste instead of using the garbage disposal or throwing it in the trash.
- Wash only full loads of laundry or use the appropriate water level or load size selection on the washing machine.
- Consider purchasing a high efficiency washing machine, which can save over 50 percent in laundry water and energy use.
- You can significantly reduce water use by simply repairing leaks in fixtures (faucets and showerheads), pipes, and toilets. A leaky faucet wastes gallons of water in a short period of time. A leaky toilet can waste 200 gallons per day. That would be like flushing your toilet more than 50 times for no reason!

## Average Indoor Household Water Use

Water conservation, using water efficiently and avoiding waste, is essential to ensure that we have adequate water today and into the future. Water is a finite resource and the supplies on Earth today are no more than what was here at the beginning of the planet. It is up to all of us to use the water we have wisely, and it is as simple as each of us making small changes. Make conserving water a daily part of your life. Moreover, remember when you save water, you save energy and money!
